

User Manual

Installation steps for the end-user:

- 1) Choose an install for your system
- 2) Wait until the installer fully finishes and closes
- 3) Click the newly created executable 'TQCalculator' to launch the software

Installation steps for the developers:

- 1) Install prerequisites:
 - a) nodejs
 - b) electron-forge
- 2) Enter a terminal of your choice
- 3) Navigate to the 'src' folder in the project folder
- 4) type in 'npm start'
- 5) The project should now launch in debug mode.

Usage:

To operate the calculator, you simply first need to enter the first number, then select an operation, and then enter the second number. Then, you need to hit the '=' button.

To use the more advanced features of the calculator, you must click the dropdown menu in the upper-right corner, and then select a desired operation. The operation will be immediately applied so you do not need to click the '=' button.

If an error occurs, you need to hit the 'C' to clear the calculator display and continue counting.

Uninstall:

- 1) Close all the instances of the calculator
- 2) Delete the folder containing the calculator
